Art Unit: 2629

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the limitation of claim 5: "a passivation film is applied as the intermediate film" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filling date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required:

The limitation of claim 5: "a passivation film is applied as the intermediate film" is not described in the Specification.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 5-6 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The limitation of claim 5: "a passivation film is applied as the intermediate film" is not described in the Specification or shown in the Figures.

Claim 6 is dependent on claim 5.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2629

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-4,7 are rejected under 35 U.S.C. 102(e) as being anticipated by Admitted Prior Art (APA).

As to claim 1, APA teaches a liquid crystal display panel, comprising:

a first substrate (See Fig. 1, item 10, paragraph 0015);

an image display part formed on the first substrate and having a plurality of pixels arranged thereon (See Fig. 1, items 10, 30, 40, paragraph 0015);

a plurality of gate and source drivers for supplying signals to the pixels; a controller for supplying control signals to the gate and source drivers (See Fig. 1, items 50, 60, paragraph 0015);

at least one conductive line at a corner portion of the first substrate, the conductive line connecting the controller and the gate drivers (See Fig. 3, items 111A-111B, paragraph 0025); and

a plurality of transparent electrode segments overlapping the conductive line with at least one intermediate film interposed therebetween (See Fig. 4, items 211, 220, 250, paragraph 0033).

As to claim 2, APA teaches a direction of the conductive line is parallel with a direction of the overlapping transparent electrode segment (See Fig. 4, items 211,250).

As to claim 3, APA teaches the conductive line transmits DC signals including a gate high voltage (Vgh), a gate low voltage (Vgl), a common voltage (Vcom), a ground voltage IGND), and a power supply voltage (Vcc), and transmit AC signals including a gate start pulse (GSP), a gate shift clock (USC), and a gate enable signal (GOE) (See paragraphs 009,0011,0024).

As to claim 4, APA teaches a gate insulation film is applied as the intermediate film (See Fig. 4, items 211, 220, 250, paragraph 0034).

As to claim 7, inherently in a LCD panel a pixel electrode is the transparent electrode in order to have high aperture ratio and brightness.

Telephone Inquire

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leonid Shapiro whose telephone number is 571-272-7683. The examiner can normally be reached on 8 a.m. to 5 p.m..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Hjerpe can be reached on 571-272-7691. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
